Part 2.1 – FIRE SAFETY IN BUDGET ACCOMMODATION BUILDINGS

Purpose

To ensure budget accommodation buildings, to which this code applies, provide for the safe evacuation of occupants.

Commencement

This version of MP 2.1 commences on 4 April 2008 and replaces the version of MP 2.1 published on 1 January 2008.

Application

This code is the fire safety standard applicable to budget accommodation buildings as prescribed by Part 3 of Chapter 7 of the Building Act 1975.

Referral agency

The Queensland Fire and Rescue Service is an advice agency for special fire services under Schedule 2 of the Integrated Planning Regulation 1998.

Associated requirements

- Building Act 1975
- Building Regulation 2006
- Fire and Rescue Service Act 1990
- Building Fire Safety Regulation 1991
- Building Code of Australia (BCA)
- Fire safety standard guidelines
- Fire safety management plan guidelines

Referenced standards

AS 1670.1-1995 Fire detection, warning control and intercom systems—System design, installation and commissioning – Part 1: Fire
AS 2118.4-1995 Automatic fire sprinkler systems – Residential
AS 2118.5-1995 Automatic fire sprinkler systems – Domestic
AS/NZS 2293.1-1998 Emergency evacuation lighting for buildings – System design, installation and operation
AS/NZS 2293.3-1995 Emergency evacuation lighting for buildings Part 3: Emergency luminaries and exit signs
AS/NZS 2444-2000 Portable fire extinguishers and fire blankets – Selection and location
AS 3786-1993 Smoke alarms

Definitions

Note: Italicised words within the body of the text are defined.

Acceptable solutions mean solutions which are deemed to satisfy the performance criteria.

Automatic means designed to operate when activated by a heat, smoke or fire sensing device.

Bedroom means a space or part of a space used for sleeping purposes excluding corridors, passageways and evacuation routes.
Budget accommodation building means the definition in the application of this code.

Common areas means areas such as entertainment rooms, foyers, lounge rooms and dining rooms but do not include kitchens, laundries or sanitary areas.

Effective height means the height to the floor of the topmost storey (excluding the topmost storey if it contains only heating, ventilating, lift or other equipment, water tanks or similar service units) from the floor of the lowest storey providing direct egress to a road or open space.

Evacuation impairment means impairment or a combination of impairments which reduces the capacity of a person to evacuate a building in an emergency, and includes any impairment that restricts mobility or the ability to understand or independently respond to an emergency evacuation.

Evacuation route means the continuous path of travel (including exits, corridors, hallways and the like) from any part of a building to a road or open space.

Exit means any or any combination of, the following if they provide egress to a road or open space:
(i) An internal or external stairway.
(ii) A ramp.
(iii) A fire-isolated passageway.
(iv) A doorway opening to a road or open space.

External wall means an outer wall of a building which is not a common wall.

Fire door means a complete door assembly having the same fire resistance level as the surrounding wall and has a certification tag fixed to the door and frame on the hinge side at 1500mm.

Fire hazard means the danger in terms of potential harm and degree of exposure arising from the start and spread of fire and the smoke and gases that are thereby generated.

Fire-isolated passageway means a corridor or passageway within a fire-resisting enclosure and includes the floor and roof or top enclosing structure that provides direct egress to a road or open space.

Fire-isolated ramp means a ramp within a fire-resisting enclosure which provides egress from a storey and that provides direct egress to a road or open space.

Fire-isolated stairway means a stairway within a fire-resisting enclosure and includes the floor and roof or top enclosing structure that provides direct egress to a road or open space.

Fire-resisting enclosure means an enclosed space within which a person will be adequately protected from the effects of a fire external to the enclosure for a period of not less than 60 minutes.

Fire safety management plan means the plan required to be prepared by the Building Act 1975 or the Fire and Rescue Service Act 1990

Fire safety system means one or any combination of the methods used in a building to:
(i) warn people of an emergency; or
(ii) provide for safe evacuation; or

1 For the purpose of assessing whether a person has an evacuation impairment under the Standard, a checklist is provided in Schedule 5.
(iii) restrict the spread of fire; or
(iv) extinguish a fire, and
includes both active and passive systems.

Fire service means a statutory authority or service constituted under an Act of Parliament and having as one of its functions, the protection of life and property from fire and other emergencies.

Floor area means:
(a) in relation to a building - the total area of all storeys excluding areas used to accommodate vehicles; and
(b) in relation to a storey - the area of all floors of that storey measured over the enclosing walls, and includes
   (i) the area of a mezzanine within the storey, measured within the finished surfaces of any external walls; and
   (ii) the area occupied by any internal walls or partitions, any cupboard, or other built-in furniture, fixture or fitting; and
   (iii) if there is no enclosing wall, an area which has a use that-
       (A) contributes to the fire load; or
       (B) impacts on the safety, health or amenity of the occupants in relation to the provisions of the BCA; and
(c) in relation to a room - the area of the room measured within the finished surfaces of the walls, and includes the area occupied by any cupboard or other built-in furniture, fixture or fitting.

Mezzanine means an intermediate floor within a room.

Minimum support ratio means the ratio obtained by:
(i) comparing the lowest number of responsible persons in the building at any time to the number of persons accommodated with an evacuation impairment in the building; or
(ii) for the purposes of compliance with Schedule 3, option (B) in buildings divided into smoke compartments, comparing the lowest number of responsible persons in the building at any time to the number of persons with an evacuation impairment accommodated in smoke compartments.

Non-combustible means a construction of the following material type:
(i) reinforced or prestressed concrete; or
(ii) steel in no part less than 6 mm thick.

Non-itinerant means a person who uses the building as a residence and is not traveling from place to place.

Open space means a space on an allotment, or a roof or similar part of a building adequately protected from fire, open to the sky and connected directly with a public road.

Path of travel means that part of an evacuation route that starts in a public corridor, passageway, hallway, stairway, landing, ramp or required exit.

Performance criteria mean the outcome that must be achieved for an element of a building or part of a building.

Personal care service means any of the following:
(a) Assistance or supervision in-
   (i) bathing, showering or personal hygiene; or
   (ii) toileting or continence management; or
   (iii) dressing or undressing; or
   (iv) consuming food.
(b) The provision of direct physical assistance to a person with mobility problems.
Part 2.1 – FIRE SAFETY IN BUDGET ACCOMMODATION BUILDINGS

(c) The management of medication.
(d) The provision of substantial rehabilitative or development assistance.

*Public corridor* means a space that serves as a means of egress from 2 or more rooms.

*Required* means required to satisfy a *performance criteria* or an *acceptable solution* of this code.

*Responsible person* means a person without an *evacuation impairment* who is the manager or agent for the manager of a *supported budget accommodation building*.

*Sanitary compartment* means a room or space containing a closet pan or urinal.

*Self closing door* means doors which are fitted with a device:
(a) with an automatic-closing operation initiated by the activation of the building's interconnected smoke alarms or smoke detection system; or
(b) with a free-arm action closing operation which closes the door or causes the door to remain closed (without preventing manual re-opening), upon the detection of smoke by the building's interconnected smoke alarms or smoke detection system; or
(c) that returns the door to the fully closed position immediately after each opening.

*Smoke alarm* means a device containing a smoke detector and an alarm sounding device.

*Smoke compartment* means a compartment that prevents the flow of smoke from the compartment into another part of the building.

*Smoke detection system* means a system of fixed apparatus, normally part of an automatic fire alarm system, in which smoke and/or fire detectors, control equipment and indicating equipment are employed for automatically detecting smoke and/or fire and initiating other action as arranged.

*Storey* means a space within a building which is situated between one floor level and the floor level next above, or if there is no floor above, the ceiling or roof above, but not-
(a) a space that contains only-
   (i) a lift shaft, stairway or meter room; or
   (ii) a bathroom, shower room, laundry, water closet, or other sanitary compartment; or
   (iii) accommodation intended for not more than 3 vehicles; or
   (iv) a combination of the above; or
(b) a mezzanine.

*Support* means, for the purposes of *minimum support ratio*, immediate on-site evacuation assistance, able to be provided by a *responsible person* to a person with an *evacuation impairment*.

*Supported budget accommodation building* means a *budget accommodation building*:
(a) in which non-itinerant persons with an *evacuation impairment* are accommodated; and
(b) in which a *personal care service* is provided to persons in association with accommodation within the building as part of the usual business or practice that is carried on within the building.

*Type A construction* means a building where all external walls, columns, common walls, internal walls, floors, and lift shafts, each have a fire resistance level in accordance with Schedule 2 of this code.

*Type B construction* means a building where all external walls, columns, and common walls each have a fire resistance level in accordance with Schedule 2 of this code.
**Type C construction** means a building where all building elements have minimal fire resistance levels and is other than *Type A or B construction*. 
**PERFORMANCE CRITERIA** | **ACCEPTABLE SOLUTIONS**
--- | ---

### Early warning system

**P1** Building occupants must be provided with appropriate automatic warning on the detection of smoke so that they may evacuate in the event of a fire to a place of safety, having regard to-

- (a) the height of the building; and
- (b) the construction of the building; and
- (c) the mobility and other characteristics of the occupants; and
- (d) the power supply available to the building;

**A1** (a) In *budget accommodation buildings* of not more than two storeys in height and of *Type B or C construction* or not more than three storeys in height and of *Type A construction*-

- (i) *smoke alarms*-

  - (A) are installed on or near the ceiling-

    - (aa) in every *bedroom*; and

    - (bb) in every *common area* where the distance between any smoke alarm and the nearest smoke alarm to it shall not exceed 10.2 m; and

    - (cc) in every enclosed or internal corridor, hallway associated with a *bedroom* or *common area* at a maximum of 5.1 m centres, or

    - (dd) if there is no enclosed or internal corridor or hallway, in an area between the *bedrooms* and the remainder of the building; and

    - (ee) on each *storey*; and

  - (B) located in enclosed or internal corridors, hallways or *common areas* are interconnected; and

  - (C) comply with AS 3786; and

  - (D) are powered by-

    - (aa) a consumer mains power supply, where available; or

    - (bb) a tamper-proof lithium battery where a consumer power supply is not available; or

(ii) a *smoke detection system* with detectors installed in locations as described for *smoke alarms* in A1(a)(i) with an interconnected audible alarm system and a local fire indicator panel is installed; or
### Performance Criteria and Acceptable Solutions

</tbody>
</table>

### Emergency Lighting

**P2** A system of lighting for safe evacuation in the event of a fire must be provided, to the degree necessary, appropriate to-

- (a) the function or use of the building; and
- (b) the floor area of the building; and
- (c) the distance of travel to an exit; and
- (d) the characteristics of the occupants.

**A2** (a) In budget accommodation buildings with a floor area of 300 m² or less, a system of lighting is installed which consists of-

- (i) a light incorporated within and activated by the smoke alarm required by A1 (a) (i) (B); or
- (ii) the existing lighting located in the enclosed or internal corridor, hallway or other common areas activated by the smoke alarms required by A1 (a) (i) (B); or
- (iii) A2 (b) (i) or (ii).

(b) In budget accommodation buildings with a floor area of more than 300 m², a system of lighting is installed which consists of-

- (i) internally illuminated exit signs using green lettering on a white background or that are classified as emergency luminaries in accordance with AS 2293.3, with a sealed rechargeable backup battery and located-
  - (A) above each doorway to a required exit; and
  - (B) at every change in direction on the path of travel; and
  - (C) with additional emergency lighting complying with AS 2293.1 or with lighting in accordance with A2 (a)(ii), installed at 12 m maximum centres between the illuminated exit signs on the path of travel; or
(ii) emergency lighting installed-

(A) in every passageway, enclosed corridor, hallway or the like having a length of more than 5 m from the centre of the bedroom doorway to the nearest doorway opening directly to-

(aa) a fire-isolated stairway, fire-isolated ramp or fire-isolated passageway; or

(bb) an external stairway serving instead of a fire isolated stairway; or

(cc) an external balcony leading to a fire-isolated stairway, fire-isolated ramp or fire-isolated passageway; or

(dd) a road or open space; and

(B) in every required non fire-isolated stairway; and

(C) within 2 m of the approach side of each required exit; and

(D) within 2 m of the intersection of centrelines at each change of direction (other than a staircase); and

(E) within 2 m of any change of floor level, on the low side; and

(F) in stairways at every landing; and

(G) adjacent to escalators and moving walks to ensure safety in disembarking; and

(H) in every required fire control centre; and

(I) in the event of a power failure is powered by a sealed rechargeable type self-contained or centralised battery facility specifically designed for emergency or standby use for a minimum of 1 hour; and
Occupant density

P3 Adequate space must be provided for occupants in each bedroom to permit ease of evacuation in the event of a fire.

A3 In all budget accommodation buildings-

(a) the maximum number of persons to be accommodated in any bedroom is obtained by dividing the floor area of the room by 2.5 square metres per person; and

(b) a minimum clear egress path of 900 mm is provided within the bedroom.

Travel distances

P4 So that occupants can safely evacuate the building, the length of paths of travel to exits must be appropriate to-

(a) the number, mobility and other characteristics of occupants; and

(b) the function or use of the building.

A4 (a) In all supported budget accommodation buildings, the distance between a doorway of a bedroom or any other point on a storey not in a bedroom and the point of egress to a road, fire-isolated passageway, fire-isolated ramp, fire-isolated stairway, external stairway/ramp used in lieu of an internal fire-isolated stairway in accordance with A6 (b) or open space does not exceed the distances set out in Schedule 3.

(b) In budget accommodation buildings with a floor area greater than 300 m² and other than supported budget accommodation buildings, the distance between a doorway of a bedroom or any other point on a storey not in a bedroom and the point of egress to a road, fire-isolated passageway, fire-isolated ramp, fire-isolated stairway, external stairway/ramp used in lieu of an internal fire-isolated stairway in accordance with A6(b) or open space does not exceed the distances set out in Schedule 4.

(c) In all budget accommodation buildings except where sprinklers are installed in accordance with Specification 2.01 of this code, a required non fire-isolated ramp or stairway greater than 1 m in height—
Part 2.1 – FIRE SAFETY IN BUDGET ACCOMMODATION BUILDINGS

PERFORMANCE CRITERIA

(i) has its commencement not more than 18 m from a bedroom door or any other point on the storey not in a bedroom; and

(ii) discharges at a point not more than-

(A) 15 m from the point of egress to a road or open space or a fire-isolated passageway; or

(B) 30 m from one of two such doorways or passageways if travel to each of them is in opposite or approximately opposite directions.

Emergency escape

P5 Exits must be provided from a building to allow occupants to evacuate safely, with their number, location and dimensions being appropriate to-

(a) the travel distance; and

(b) the number, mobility and other characteristics of occupants; and

(c) the function or use of the building; and

(d) the height of the building; and

(e) whether the exit is from above or below ground level.

Acceptable Solutions

A5 (a) In budget accommodation buildings with a floor area of 300 m² or less, the building has access to at least one exit.

(b) In budget accommodation buildings with a floor area greater than 300 m² and of not more than two storeys and of Type B or C construction or not more than 25 m effective height and of Type A construction, each storey has access to at least one exit.

(c) In budget accommodation buildings with a floor area greater than 300 m² and of more than two storeys but not more than 25 m effective height and of Type B or C construction, each storey has-

(i) access to at least two exits; or

(ii) direct access to a road or open space; or

(iii) access to at least one exit and a sprinkler system is installed in accordance with Specification 2.01 of this code.

(d) In all budget accommodation buildings with a floor area greater than 300 m² and of more than 25 m effective height, each storey has access to at least two exits.
### Part 2.1 – FIRE SAFETY IN BUDGET ACCOMMODATION BUILDINGS

<table>
<thead>
<tr>
<th>PERFORMANCE CRITERIA</th>
<th>ACCEPTABLE SOLUTIONS</th>
</tr>
</thead>
<tbody>
<tr>
<td>(e) In all <em>budget accommodation</em> buildings, exits that are <em>required</em> as alternative means of egress are-</td>
<td></td>
</tr>
<tr>
<td>(i) distributed as uniformly as practicable within or around the <em>storey</em> served and in positions where unobstructed access to at least two <em>exits</em> is readily available from all points on the <em>storey</em> including lift lobby areas; and</td>
<td></td>
</tr>
<tr>
<td>(ii) not less than 9 m apart; and</td>
<td></td>
</tr>
<tr>
<td>(iii) not more than 45 m apart; and</td>
<td></td>
</tr>
<tr>
<td>(iv) located so that alternative <em>paths of travel</em> do not converge such that the <em>paths of travel</em> are not less than 6 m apart at any point.</td>
<td></td>
</tr>
<tr>
<td>(f) In all <em>budget accommodation</em> buildings, in a <em>required exit</em> or <em>path of travel</em> to a <em>required exit</em>-</td>
<td></td>
</tr>
<tr>
<td>(i) the unobstructed height throughout is not less than 2000 mm, except the unobstructed height of any doorway may be reduced to not less than 1980 mm; and</td>
<td></td>
</tr>
<tr>
<td>(ii) the unobstructed width of each <em>required exit</em> or <em>path of travel</em> to a <em>required exit</em>, except for doorways, is not less than 900 mm nominal; and</td>
<td></td>
</tr>
<tr>
<td>(iii) landings not less than 750 mm long are provided at doorways along a <em>path of travel</em> to a <em>required exit</em> or at doorways of <em>required exits</em> where the door sill height is more than 190 mm above the finished surface of the floor, ground, balcony or the like, to which the doorway opens.</td>
<td></td>
</tr>
<tr>
<td>(g) In all <em>budget accommodation</em> buildings, doors in a <em>required exit</em> or in the <em>path of travel</em> to a <em>required exit</em>-</td>
<td></td>
</tr>
<tr>
<td>(i) are readily able to open without a key from the side that faces a person seeking egress, by a single hand downward action or pushing action on a single device which is located between 900 mm and 1200 mm from the floor; and</td>
<td></td>
</tr>
</tbody>
</table>
(ii) either-

(A) swing in the direction of the nearest required exit unless it is the only required exit from the building and it is fitted with a device for holding it in the open position; or

(B) slide open providing that-

(aa) the door is in a required exit or forms part of a required exit; and

(bb) the door is able to be opened manually under a force of not more than 110N; and

(cc) clearly visible signage is installed on the door and incorporates the word “SLIDE” along with a directional arrow indicating the direction of slide of the door.

Protection of exit paths

To protect evacuating occupants from a fire in the building, exits must be fire-isolated, to the degree necessary, appropriate to-

(a) the number of storeys connected by the exits; and

(b) the fire safety system installed in the building; and

(c) the function or use of the building; and

(d) the number of storeys passed through by the exits.

In budget accommodation buildings with a floor area greater than 300 m²-

(a) where exits connect, pass through or pass by more than two consecutive storeys in a building of Type B or C construction or more than three consecutive storeys in a building of Type A construction-

(i) every required exit is fire-isolated; or

(ii) a sprinkler system is installed in accordance with Specification 2.01 of this code.

(b) An external stairway or ramp may serve as a required exit in lieu of a fire-isolated exit serving a storey below an effective height of 25 m, if -

(i) the stairway or ramp is non-combustible throughout; and
PERFORMANCE CRITERIA | ACCEPTABLE SOLUTIONS
---|---
(ii) *fire doors* opening onto the stairway are fire resistance rated to 60 minutes; and

(iii) windows are-

(A) located more than 2 m above the line of the treads or ramp or the *path of travel* at ground level; or

(B) located more than 2 m from the stairway or ramp or the *path of travel* at ground level; or

(C) are fire rated to 60 minutes and fixed closed; or

(D) protected by internal or external wall-wetting sprinklers.

---

**Exit signage**

**P7** To facilitate evacuation, suitable signs or other means of identification must, to the degree necessary-

(a) be provided to identify the location of exits; and

(b) guide occupants to exits; and

(c) be clearly visible to occupants; and

(d) operate in the event of a power failure of the main lighting system for sufficient time for occupants to safely evacuate.

**A7** For *budget accommodation buildings* with a *floor area* greater than 300 m²-

(a) *exit signs*-

(i) where used as emergency lighting are in accordance with A2 of this code; or

(ii) where not used as emergency lighting are in accordance with AS/NZS 2293.1-1998 and AS/NZ 2293.3-1995; and

(b) *exit signs* are clearly visible to persons approaching a *required exit*, and installed on, above or adjacent to each-

(i) door providing direct egress from a *storey* to-

(A) an enclosed stairway, passageway or ramp serving as a *required exit*; and

(B) an external stairway, passageway or ramp serving as a *required exit*; and
### Portable fire extinguishers

**P8** Fire extinguishers must be installed to the degree necessary to allow occupants to undertake initial attack on a fire appropriate to-

(a) the function or use of the building; and

(b) any other fire safety systems installed in the building; and

(c) the fire hazard.

**A8** For budget accommodation buildings with a floor area greater than 300 m²:

(a) existing portable fire extinguishers are located in accordance with the Australian Standard applicable at the time of installation; or

(b) for buildings with no portable fire extinguishers, extinguishers are selected, located and distributed in accordance with AS 2444-2000.

### Fire hose reels

**P9** A fire hose reel system must be installed to the degree necessary to allow occupants to safely undertake initial attack on a fire appropriate to-

(a) any other fire safety systems installed in the building; and

(b) the fire hazard.

**A9** For budget accommodation buildings with a floor area greater than 500 m²:

(a) a fire hose reel system is installed in accordance with the Australian Standard applicable at the time of installation; and

(b) fire hose reels have the nozzle end of a fully extended fire hose fitted to the reel and laid to avoid any partitions or other physical barriers and reach every part of the floor of the storey.

### Maintenance of fire safety systems

**P12** Omitted 22 August 2005

**Omitted 22 August 2005**

### Building Code of Australia performance

**P13** In buildings other than supported budget accommodation buildings that do not comply with A1, A2 and A4-A11 of the fire safety standard, performance requirements P1, P2 and P4-P11 may be met using the performance requirements of the Building Code of Australia.

For budget accommodation buildings, other than supported budget accommodation buildings, that have a current certificate of classification for the whole of the building that was issued-

(a) in relation to an application for a change of classification; or

(b) in relation to a development application for building work, other than building work required to ensure the building conforms with the fire safety standard

the whole building complies with the Building Code of Australia as applicable at the time of the application.

**Note:** If P13 is used to comply then P1, P2 and P4-P11 of this standard do not apply to the building.

### Specification 2.01 – Sprinkler systems

For buildings less than 4 storeys in height, buildings comply with Australian Standard AS 2118.5-1995 Automatic fire sprinkler systems - Domestic

For buildings of 4 or more storeys in height, buildings comply with Australian Standard AS 2118.4-1999 Automatic fire sprinkler systems - Residential

Notes to Table A:

1. Additional travel distance is allowed by using the following compliance options where indicated as applicable in Table A.

   In single storey buildings in which travel in different directions to alternative exits is available from bedroom doorways and the building's fire safety management plan requires monthly evacuation drills, travel distances may be increased:

   (a) up to a maximum of 15 m if all smoke alarms are interconnected; or
   (b) up to a maximum of 15 m if a smoke detection system is installed that complies with A1(a)(ii) of this code; or
   (c) up to a maximum of 20 m where a smoke detection system is installed to AS 1670.1 requirements.

2. For the purposes of Columns 2 and 3, a bedroom with self-closing doors must be a smoke compartment.

OR

(B)

In buildings of two storeys or less, sprinklered in accordance with Specification 2.01 of this code, and where;

A. all smoke alarms are interconnected or the building has a smoke detection system that complies with A1 (a) (ii) of this code; and
B. the minimum support ratio is
   (a) at least 1:10 in one storey buildings or across smoke compartments in buildings over 500 m²; and
   (b) in two storey buildings, at least 1:5; and
C. the building's fire safety management plan requires a monthly evacuation drill; and
D. the maximum travel distance from bedroom doorways to a point from which travel in different directions to alternative exits is available does not exceed 10m;

the building’s maximum travel distance is 25 m and can be extended;

(i) by an additional 3 m if the building is less than 500 m$^2$ in floor area or it is divided into smoke compartments of 500 m$^2$ or less;
(ii) by an additional 5 m if the smoke detection system is installed to AS 1670.1 requirements; or
(iii) by an additional 8 m if the building complies with both (i) and (ii)

Schedule 4 – Maximum exit distances (m) for budget accommodation buildings with a floor area greater than 300 m$^2$

## Supported accommodation
### EVACUATION IMPAIRMENT ASSESSMENT FORM

This form may be used to assess whether a person who is a non-itinerant occupant of the building has an evacuation impairment. Use this form for the purposes of compliance with A4(a) of the Fire Safety Standard only.

**Note 1:** An occupant does not have an evacuation impairment when ALL answers on the form are ticked with Yes. Do not answer “Yes” to any question unless the occupant is able to meet the criterion at all times of the day or night.

**Note 2:** If this form is being used to exclude occupants from the need for evacuation support, the excluded person must be reassessed when the person’s evacuation ability changes or otherwise monthly. Monthly evacuation drills should be used to determine the ability of a person to safely evacuate the building in the event of fire.

<table>
<thead>

</tr>
</tbody>
</table>

**Note 3:** If the occupant has an evacuation impairment, you MUST include him/her in your minimum support ratio calculations. If the occupant does not have an evacuation impairment, you do not need to include him/her in your minimum support ratio calculations.

**Note 4:** The evacuation plan mentioned in the above assessment table forms part of the building’s fire safety management plan.

**Note 5:** If this form is used to exclude an occupant from the requirement that they be provided with evacuation support, a copy must be available in the building for inspection by authorised persons under the Local Government Act 1993 or authorised fire officers of the Queensland Fire and Rescue Service at any time the building is occupied.
