CHIEF EXECUTIVE APPROVAL 04/2016
Plumbing and Drainage Act 2002, part 5.

Approval

1. The Ozzikleen GTS10 ("the system") described in the Specifications and Drawings in the attached Schedule and manufactured by Suncoast Waste Water Management ("the manufacturer") (ABN 62 063 770 534) has been assessed in accordance with the Queensland Plumbing and Wastewater Code (QFW Code) dated 15 January 2013.

2. Approval is granted for an advanced secondary quality greywater treatment system, subject to compliance by the manufacturer with the requirements of the Plumbing and Drainage Act 2002, part 5 and the conditions of approval detailed below.

3. This approval, the conditions of approval and the Schedule comprise the entire Chief Executive Approval document.

4. Any modification by the manufacturer to the design, drawings or specifications scheduled to this approval must be approved by the Chief Executive.

Conditions of approval

5. The manufacture, installation, operation, service and maintenance of the systems must be in conformity with the conditions of this Chief Executive Approval.

6. The advanced secondary quality greywater treatment system may only be used on premises that generate per day:

   (a) a maximum hydraulic loading of 2,000 litres/day; and

   (b) a maximum organic loading of 600 grams/day BODs.

7. For the system to meet the requirements of an advanced secondary quality greywater treatment system, the system must produce the following effluent quality —

   (a) 90% of the samples taken must have a BODs less than or equal 10g/m³ with no sample greater than 20g/m³; and

   (b) 90% of the samples taken must have total suspended solids less than or equal 10g/m³ with no sample greater than 20g/m³; and

   (c) 90% of the samples taken must have thermotolerant coliform count not exceeding 10 organisms per 100 mL with no sample exceeding 200 organisms per 100mL.

   (d) Where chlorination is the disinfections process, the total chlorine concentration shall be greater than or equal to 0.5gm³ and less than 2.0g/m³ in four out of five samples taken.

8. Each system must be serviced in accordance with the manufacturers details supplied in the owner’s service and maintenance manuals.

9. Each system must be supplied with —

   (a) a copy of this Chief Executive Approval document;

   (b) details of the system and ancillary equipment;

   (c) instructions for authorised persons for its installation.

Chief Executive Approval
(d) a copy of the owner's manual to be given to the owner at the time of installation; and
(e) detailed instructions for authorised service personal for its operation and maintenance.

10. This approval does not extend, apply to, or include the land application system used in
    conjunction with an approved system installed on premises.

11. At each anniversary of the Chief Executive Approval date, the supplier must submit to the
    Chief Executive a list of all systems installed in Queensland during the previous 12 months.

12. Where the Chief Executive is notified of any system failures the Chief Executive may
    randomly select a number of installed systems for audit. The Chief Executive will notify
    the National Association of Testing Agencies (NATA) accredited laboratory nominated by the
    supplier, which systems are to be audited for Biochemical Oxygen Demand (BODs) and
    Total Suspended Solids (TSS). The sampling and testing of the selected systems, if
    required, is to be done at the supplier's expense. The following results must be reported to
    the Chief Executive;

    (a) Address of premises.
    (b) Date inspected and sampled.
    (c) Sample identification number.
    (d) Biochemical Oxygen Demand (BOD5).
    (e) Total Suspended Solids (TSS).

13. The Chief Executive may, by written notice, cancel this approval if the manufacturer fails —
    to comply with one or more of the conditions of approval; or within 30 days, to remedy a
    breach, for which a written notice been given by the Chief Executive.

14. This approval may only be assigned with the prior written consent of the Chief Executive.

15. This approval expires on 15 April 2021 unless cancelled earlier in accordance with paragraph
    13 above.

Effluent is suitable for toilet flushing / washing machine reuse

### Treatment Plant Construction:
- Tank and components: Polyethylene (MDPE)
- All Pipe work: PVC

### Electrical Equipment:
- Air Blower: 85 litre/min
- Effluent Pump: Submersible
- Controls: Electronic

### Alarm System:
- Alarm System: 12 Volt Audio/Visual
- Alarm signal: Indicator lights for Power, Blower

### Aeration Tank:
- Aeration tank volume: 4850 litre
- Residence time: 46 hr

### Disinfection equipment:
- Chlorinator Type: Tablet Dispenser Cassette
- Chlorine min contact time (max flow): 86 min

### Motor Box:
- Equipment Contained: Air Blower, Control Board, Decanter Solenoid Valve equipment

### Effluent Tank and Pump:
- Effluent storage compartment volume: 523 litres
- Effluent pump duty: 40 litres/min @ 8 m head
- Pump Mounting: Suspended on discharge pipe

### Irrigation Equipment:
Basic irrigation equipment is supplied with the treatment plant. The irrigation system could be of several different formats. Check with Local Authority requirements.
