Subject: submission

Dear Sir,

I notice that in the Biofuel Discussion paper, what is not mentioned is the fact that for every liter of ethonal produced and sold to the govt and the public is a saving of at least two liters of totally imported fossil fuels, completely owned by a foreign entity that removes dollars from the Qld economy. The savings from the sale of a locally produced item means that that dollar is completely consumed back into the Queensland economic cycle.

When referring to millions of liters of ethonal, this obviously equates to extra millions retained by the treasures coffers.

Never forget, money talks. The matter is now up to the Queensland govt to draw graphs and present your financial models to the public and the Nation. Idepandant financial parties or not.

I repeat, every liter of energy produced and sold in Queensland will save the treasures office the cost of importing of a minimum of TWO liters of foreign owned and supplied energy. Let the department and the manufacturers work it out.

I slowly began to reduce my purchases of E10 when the price between E10 and fossil fuel became small enough to reduced my interest in locating the nearest E10 outlet. Then I noticed that some E10 outlets closed.

Qld [REDACTED]

1. N/A
2. N/A
3. To begin with, yes.
4. ASAP
5. That would depend on market suppliers and consumer confidence, all depended on the marketing campaign by the suppliers.
6. Dependant on the Qld govt release date for the free market to begin supplying to the public.
7. This will be decided by the suppliers to the public.
8. Yes.
9. Yes. Let the suppliers find their outlets. If the price differential is sufficient, as much as is produced will be sold. Money talks.
10. Yes.
11. Yes.
12. Give the suppliers free range within the protocols. The suppliers will soon let the govt be aware of any storatage of ddat to act on.
13. Discuss with suppliers.
14. Discuss with suppliers.
15. Yes.
16. Yes.
17. N/A
18. Only if the expert panel has limited powers over the free market.
19. The expert panel should include overseas activities and results.
20. Yes

21. No. Excessive rules and regs will stifle this attempt to shake out the Oil companies absolute powers.
22. None.
23. Normal commonsense insurances and safety protocols.
24. Price differentials. If the price of a mandated item is only 1-2 % different than non-mandated consumer good, then this is a waste of time. The price difference must be as much as 15%
Consumers will always buy a discounted product,as is seen with Coles and Woolworths with their petrol discounts.
25. How?
26. Yes. So will 15% cheaper supply of the consumer goods. Money talks.
27. Biofuels are safe. By the Qld govt itself purchasing and advertising that the govt is using said biofuels with logos on their transport, ie: trains and all public transport, including councils.
28. Ensure that the price differential is at least enough to encourage public consumption of the biofuel over fossil fuel.
29. Via the suppliers of ethonal, who will very smartly bring any overt pressures from the Oil companies to the attention of the mandated protocols.
30. Public consumption.
31. 10% mandate.
32. Yes. Manufactures with a target will only get supplies from the farming community when there is an economic return to both parties.
33. Allow the manufactures the right to continue with feedstock by purchasing interstate.
34. Guarenteeing a mandate for a time that will be decided by the free market. Mandate for as long as it takes for independent investors to overcome initial financial outlays.
35. Initial mandate.
36. Mandate the goods to protect those suppliers that will have to invest large amounts to begin operations.
37. Where ever the manufactures decide to commence operations.
38. Continued govt investment in the industry will advertise to the suppliers and the public who will purchase cheaper energy will be a sign of confidence for the future.
